FILING RANGE TREND PHOTO NEGATIVES

The Dillon Montana District Office has recommended using a small sectional file for storing range trend photograph negatives. The system involves filing negatives in glassine envelopes which in turn are placed in an acetate sleeve for storing in the sectional file. See following illustration:

The system provides a means for keeping negatives clean, protection from loss, easy access and identification. The system will be included as an alternative procedure in the forthcoming new manual release on filing procedures.

Materials and an up-to-date price list can be ordered by number shown in the illustration from:
